

Case Study

The Enabling Specialists 24:7

Project Name: Greenwich Council
Asbestos Removal Framework

Location: Greenwich, London

Project Value: £1,000,000 per annum

Erith have been framework contractors for Greenwich Council since 2003, covering both reactive and planned maintenance across the Council's property portfolio including both social housing and educational properties.

The amount of work completed within these types of occupied properties has led to us to develop bespoke procedures for managing; complaints, security (all our staff carry ID and have CRB checks), site cleanliness and liaison.

Erith provide a 24/7 emergency call-out system for Greenwich Council should asbestos be damaged and need protecting. This is often the result of contractors working in properties and therefore tends to be during working hours, although we have the facility to respond outside of normal working hours.

Response times are dictated by the client and require a response within 2 hours. Time to respond is a KPI on these types of projects and is subject to continuous review which assists in helping us to continuously improve.
