

Case Study

The Enabling Specialists 24:7

Project Name: Lodge Road

Location: St John's Wood, London

Project Value: £500,000

The contract formed a part of the disinvestment of the **Lodge Road Substation** in St John's Wood.

The majority of the work involved the removal of the **internal lining of the substation** which consisted of in excess of **2,000 m² of Asbestos Insulation Board**. In addition we also safely removed and disposed of for recycling significant quantities of plant and equipment.

While employed directly by Freedom Maintenance there were other stakeholders making up the client team and Erith worked closely with all these parties to establish processes that ensured the smooth planning and delivery of all work on site.

The locality of the site being a highly residential area meant that we spent a great deal of time and effort in liaising with local people to reduce the impact of the project.
