

Sustainability Policy

Erith are committed to ensuring sustainability is at the heart of everything that we do. The sustainable design and construction of any major works project requires the application of many disciplines and impacts on the entire process from concept to completion and should embody the four basic principles of Sustainable Development, these being :

- Social progress which recognises the needs of everyone;
- Effective protection of the environment;
- Prudent use of natural resources;
- Maintenance of high and stable levels of economic growth and employment.

These principles can be used as a starting point from which to evaluate various scenarios proposed at the design stage and put in place measures to direct and manage these throughout the project, while taking into consideration not just the local site but all potential sites and stakeholders that could possibly be impacted.

The sustainability management system will adopt the standard PLAN-DO-CHECK-REVIEW model of management systems and will be entirely in compliance with our own ISO: 14001 Environmental Management System.

It is Erith's intention to go further by incorporating best practice for sustainability management systems into our day to day operations and in our materials procurement processes.

A handwritten signature in black ink, appearing to read 'Tony Darsey', with a stylized flourish at the end.
